## Work Experience

**Mesa Public Schools – Web Programmer** Feb 2017 – Present

- Help maintain and troubleshoot the main district website, [www.mpsaz.org](http://www.mpsaz.org). This is a custom PHP content management system that isn't being actively developed on, so most work on this project involves bug fixes.
- I have been working on a new project to help parents choose the right school for their children. The front end of the application is a SPA written in Vue.js and the backend is an administrative dashboard built with Laravel. We are hosting the project internally on Ubuntu 16.04 virtual machines.
- Our department is currently the Google Suite Administrator for the district, so responsibilities also include managing email, YouTube, Google Groups and other G Suite products.

## Internship

**UTILITWORX – Web Developer** Nov 2016 – Dec 2016

- A startup company based in Chicago that was contracted to build a management application for PG & E, a construction company. This was a large scale Laravel application where I got to help build an upload feature for excel spreadsheets.
- I worked remotely, and communicated with the team via Slack.

## Education

**Arizona State University** B.A. Philosophy, May 2010

- Developed critical thinking and communication skills by studying arguments.
